Backup for Microsoft 365

→ Do you control your Microsoft 365 data?

If you use Microsoft 365 to create, share, and store documents and email communications critical to the day-to-day operation of your business, it's your responsibility to take control of and protect your data.

Backup for Microsoft 365 partners TasmaNet secure data protection and expert support with world-class Veeam backup and recovery technology to provide a simple, cost-effective, and dependable cloud backup solution for every business using Microsoft 365.

→ How safe is your business data?

Your Microsoft 365 data is stored in multiple data centres and is highly available, but access to your data is dependent on access to the platform so Microsoft recommends that subscribers regularly backup their content and data.

Microsoft 365 does not maintain a separate backup copy of your data. Without dedicated backups, your data is not protected from accidental or malicious deletion from within your business. Some subscriptions allow retention policies, but these can be complex and have limits to how they are applied.

→ Flexible, secure, and dependable

TasmaNet Backup for Microsoft 365 provides the security of an off-site backup and ensures that all data is protected irrespective of retention policies in place.

If something goes wrong, your data can be quickly restored, either to the original location or to a new destination. We'll help you locate and restore individual files or emails, complete user and mailbox accounts, or implement comprehensive disaster recovery for your entire business.

→ Powered by world-class partners
